

1 OPPORTUNITY TRACKING INFORMATION SYSTEM

3 Abstract of the Disclosure

4 A communication network system includes a plurality of client computers
5 communicatively coupled to a network, which in turn is coupled to one or more server
6 computers and at least one database. A method for reviewing and tracking workflow tasks,
7 anomalies and other information using the system provides real-time access of the status of
8 tasks and projects on a continuing basis. Individuals interact with the system to provide
9 updates to the status of tasks. The system automatically escalates the completion of an
10 overdue task or anomaly that has failed to be completed within a predetermined time period.
